

On-Prem Exchange Upgrade & Migration

On-Prem Exchange Upgrade & Migration

Industry: Healthcare

Location: Dallas, TX & Fort Worth, TX

Date: May 06, 2016

Description

Relationship: First project

Problem

Client was having issues with mobile access to emails and the current Microsoft Exchange 2003 solution in place offered a limited feature set for their employees. Additionally, Microsoft Exchange 2003 was an end-of-life product.

Solution Selected

Microsoft Exchange 2010

The Project:

Previously, as part of a larger National healthcare network, the company decided it was time to split off and setup their own sustainable offices in both Dallas and Fort Worth to better manage their growing eye care practice.

Upon assessing the client's network and mobile communication needs, Axxys advised that an update of their near end of support Microsoft Exchange Server 2003 to Microsoft Exchange Server 2010 would be the best first step. This solution would provide the email experience and security they desired while allowing them maintain their current hardware and on-premise infrastructure investments. Implementing and migrating the company from Exchange 2003 to 2010 proved successful as it

provided a consistent communications delivery between the company and its employees, and its employees and their patients. The solution also provided a more secure delivery of data while providing the client with full control of their mail policies, rights and archiving needs.

Technologies Implemented:

- Microsoft Exchange 2010
- Microsoft Licensing
