# Stop ransomware dead in its tracks.
Complete Cybersecurity with Axxys & KnowBe4

No matter how thorough your cybersecurity plan, if you're not training your employees, you're missing a critical component. But no worries. Axxys and KnowBe4 have partnered to ensure all your bases are covered.

Cybersecurity by the numbers.

- 25% of all breaches rely on inside human interaction.
- 43% of cyber attacks target SMBs.
- 60% of malware is delivered and installed via email.
- 90-95% of all successful cyber attacks begin with phishing emails.

CSO reports that **security training programs** "may be **the world's best ROI** in the war against cybercrime."

Axxys keeps you in the know.

Cyber criminals rely on unwitting help to breach networks. Informed employees make that much harder, which is why Axxys has partnered with KnowBe4 to provide our clients with the best employee cybersecurity training around.

KnowBe4's security training.

KnowBe4's security training starts with a baseline assessment and then follows that up with tons of inactive online resources. Of course, cyber criminals change tactics all the time. KnowBe4 will help your staff stay prepared with ongoing tests and additional training.

KnowBe4
Human error. Conquered.
